I've forwarded your concerns desire for the sharing of sampling results and to be kept apprised of leading edge and the passage of slug down San Juan river.

Rob wise our emergency response coordinator will be contacting you shortly to discuss water needs for montezuma creek and aneth communities.

I let the know if your need for added water haulers.

The how long question will be answered by what the residual effect is. We are doing base line testing in front of the plume so we have a comparison for after plume passes. So we can see residual and get a predictor to when things will return to normal. From several update meeting yesterday, I did not hear of anyone else doing baseline testing. Testing happening during and after but before. So not sure how they will get residual impact numbers. Maybe someone is but no reports I heard. The guy from USEPA there really had no response or data to questions asked.

The water hauling were going to be doing will keep the normal system operation going.... So I heard they had a tanker out there but everyone connected to the system can keep using it normally for their domestic purposes. Our staff will be coordinating to make presentation to the chapters in the next couple days.

Rex

Yolanda

Many concerns raised about Navajo systems in need of water (Halcito, Aneth, Montezuma Creek). In some cases, it appears that San Juan County Emergency Management is providing water due to wells being shut down. They want to know how long it will be before the system is back online given the startup of school and increased demand.

soon. Might you be able to confirm and

County Emergency Management confirmed. Navajo Utilities shut off wells today. If other entities need water please let me know ASAP.
